

1. Is the Python Standard Library included with PyInputPlus?

PyInputPlus is not a standard library

2. Why is PyInputPlus commonly imported with import pyinputplus as pypi?

pypi is an alias of PyInputPlus.

3. How do you distinguish between inputInt() and inputFloat()?

inputInt() : Accepts an integer value and returns int value

inputFloat() : Accepts integer/float point value and returns float value

4. Using PyInputPlus, how do you ensure that the user enters a whole number between 0 and 99?

Inputint function : set the min=0 and max=99

Import PyInputPlus as pyip

pyip .inputInt(min=0, max=99)

5. What is transferred to the keyword arguments allowRegexes and blockRegexes?

blockRegexes: Certain inputs can be blocked i.e. 'these values are invalidates' by setting parameter's value as the regex pattern we want to invalidate

allowRegexes: Certain inputs are accepted i.e. 'these inputs are validated' by setting the parameter's value as the regex pattern we want to validate

6. If a blank input is entered three times, what does inputStr(limit=3) do?

It will throw RetryLimitException

7. If blank input is entered three times, what does inputStr(limit=3, default='hello') do?

Blank values are not allowed.

Blank values are not allowed.

Blank values are not allowed.

'hello'
